RESTRICTION

I. Restriction to one of the following inventions is required under 35 U.S.C. §121:

I. Claim 1 is drawn to a single nucleotide polymorphism, classified in Class 435, subclass 6.

II. Claims 2-7 and 13-16 are drawn to a method for screening by genotyping through PCR with nucleic acids, classified in Class 435, subclass 91.2.

III. Claim 8 is drawn to a method of detecting a variant protein, classified in Class 530, subclass 300 and 350.

IV. Claims 9 and 10 are drawn to a method of pre-screening through peptide binding assays, classified in Class 435, subclass 7.1.

V. Claims 11 and 12 are drawn to a method of regulating expression and identifying drug targets by measuring in vitro transcription of nucleic acids, classified in Class 514, subclass 44.

2. The inventions are distinct, each from the other because of the following reasons:

a. Inventions I and III and I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions and are not disclosed as capable of use together because the nucleic acids of invention I are not required to practice the methods of inventions III and IV involving polypeptides.

b. Inventions I and II and I and V, are related as products and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acid of invention I can be used in a materially different process such as for protein synthesis.

c. Inventions II and III, II and IV, II and V, III and IV, III and V, and IV and V are drawn to patentably distinct methods which involve different method steps, include different reagents and have different objectives. Invention II involves screening by genotyping through PCR with nucleic acids. The invention of Group III is drawn to a method of detecting a variant protein. Group IV is drawn to a method of pre-screening involving the use of peptide binding assays. Group V is drawn to a method of regulating expression by measuring the transcription of nucleic acids. The methods all have different method steps, objectives and reagents. Therefore the methods are distinct over one another.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by the different classifications and their divergent subject matter and because these inventions require different searches that are not co-extensive, examination of these distinct inventions would pose a serious burden on the examiner and therefore restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement, to be complete, must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
